

Baby Blue Eyes

Full sun
Light, sandy soil
3" – 6"
Blooms March
through May

A California native wildflower, Baby Blue Eyes prefers moist flats and hillsides. Bright blue blooms with light blue to white centers.

(Nemophila menziesii)

Blue Dicks

Partial to full sun
Light to sandy soil
1' – 2'
Blooms March
through May

A fast growing plant native to the Southwest. The purple flowers are clustered at the end of a bare stalk. Found scattered throughout the hillsides.

(Dichelostemma capitatum)

Rancher's Fiddleneck

Full sun
Light, sandy soil
1' – 3'
Blooms early
spring through
late spring

The small trumpet-shaped flowers are clustered at the top of coiled flower spikes. The yellow to orange flowers are found along the high water road.

(Amsinckia menziesii)

Diamond Valley Lake
The *jewel* of California Lakes

California Poppy

Full sun
Light to sandy soil
12" – 18"
Blooms April through August

Designated state flower in 1903, the poppy is a mainstay of the California spring landscape. Use for color accent on banks, borders, rock gardens and meadows.

(Eschscholzia californica)

Owl's Clover

Full to partial sun
Sandy
To 2'
Blooms March to May

A plant with purple flowers that is commonly seen throughout California. The flowers are in dense terminal spikes. Owl's clover is partially parasitic and can be found on grassy slopes.

(Castilleja exserta)

Arroyo Lupine

Full sun
Heavy, clay soils
To 4'
Blooms late winter to early spring

This annual has an extensive root system that makes it useful for bank stabilization. The deep blue flowers attract birds and butterflies. Part of the plant is poisonous if eaten.

(Lupinus succulentus)

Caterpillar Phacelia

Full sun
Sandy soil
To 2'
Blooms March to June

Branches are covered with long, white hairs. The pale blue to lavender flowers appear in dense coils. Common on dry slopes.

(Phacelia cicutaria)

California Goldfields

Full sun
Poor soil
To 10"
Blooms mid-winter to late spring

A fast-growing annual that requires little water and grows with spring rains. Attracts butterflies and birds.

(Lasthenia californica)

Canterbury Bells

Full sun
Sandy soil
4" to 2'
Blooms March to June

Prefers dry disturbed areas such as burns, around rock outcrops and roadsides. The purple bell-shaped flowers are a true California native.

(Phacelia minor)

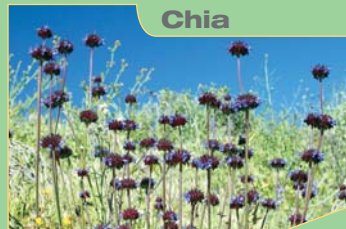

Brittlebush

Full sun
Sandy soil
To 3'
Blooms Late spring to early summer

A hardy, heat-resistant shrub with yellow daisy-like flowers that are attractive to butterflies and birds. Easy to grow from seed or cuttings. Once established, doesn't require water.

(Encelia farinosa)

Chia

Full sun
Sandy and decomposed granite soil
6" to 15"
Blooms March to June

This plant is a fire follower and is commonly found on dry disturbed soils. Look for chia on cut slopes along the North Hills high water road.

(Phacelia columbariae)
